PREFACE.

En publiant cet ouvrage l'auteur n'a d'autre but que de répondre au besoin urgent qui se fait depuis longtemps sentir, dans les Banques et dans les Maisons de commerce, de tables d'Intérêt renfermant les taux en usage dans ces divers établissements.

Ces tables seront aussi d'une grande utilité aux hommes de profession, et à tous les hommes d'affaires, en ce qu'elles leur épargneront une grande perte de temps, occasionnée par l'emploi de toutes autres tables d'intérêt, qui ne donnent pas, pour certains taux, des détails suffisants pour les besoins actuels.

L'auteur croit pouvoir affirmer que ce travail est le plus complet en ce genre qui ait été publié jusqu'à ce jour, et il n'hésite pas à déclarer que rien n'a été épargné pour en vérifier la parfaite exactitude.

Convaincu que son ouvrage rendra d'importants services, il espère recevoir un accueil bienveillant de la part des Institutions financières, des Maisons de commerce, et de tous les hommes de profession, et d'affaires, en général.

EMPLOI DE CES TABLES.

Pour tout nombre de piastres au dessous de cent, prenez l'intérêt du nombre semblable de centaines, et considérez les piastres de cet intérêt comme des cents, et les cents, comme des parties de cent. Ainsi, \$4,500, à sept pour cent, pour 75 jours, donnent \$64.72,6, alors \$450, au même taux, et pour le même temps, donneront \$6.47,2, et \$45, \$0.64,7.

NOTE.—Pour tout nombre au dessus de 10,000, prenez le nombre correspondant au dessous de 10,000, et avancez le point décimal à droite. Ainsi \$4,500 à 7 pour cent, pour 75 jours, donnant \$64.72,6, \$45,000 donneront \$647.26.

Quel est l'intérêt de \$2344.59, * pour 75 jours, à 7 par cent ?

$$\begin{array}{r} 2300 = 33.08,2 \\ 45 = 64.72,6 \\ \hline \$33.72,92,6.....\text{soit } \$33.73. \end{array}$$

Quel est l'intérêt de \$2753.23, pour 223 jours, à 6 par cent ?

$$\begin{array}{r} 2700 = 98.97,5 \\ 53 = 1.94,28 \\ \hline \$100.91,78.....\text{soit } \$100.92. \end{array}$$

Pour l'intérêt de $\frac{1}{2}$ par cent, prenez l'intérêt à 5 par cent. Puis divisez cet intérêt par 10; ou plutôt mettez le point décimal avant les unités de piastres. NOTE.—Pour l'intérêt de 1 par cent, faites la même opération avec le taux à 10 par cent.

Quel est l'intérêt de \$2438, pour 168 jours, à $\frac{1}{2}$ par cent ?

$$\begin{array}{r} 2400 = 55.23,3 \\ 38 = 87,45 \\ \hline \$56.10,75.....\text{soit } \$56.11 \text{ à } 5 \text{ par cent.} \\ \text{Soit } \$5.61 \text{ à } \frac{1}{2} \text{ par cent.} \end{array}$$

* En général dans le calcul de l'intérêt, quand il y a 50 cents ou plus, on ajoute 1 piastre au montant; quand il y en a moins, on ne les compte pas. Si cependant on voulait l'intérêt des cents, on prendrait l'intérêt d'un nombre semblable de piastres, et l'on considérerait les piastres de cet intérêt comme des cents, et les cents comme des parties de cent.

PREFACE.

In publishing this work, the author aims at nothing else but to answer the urgency generally felt long since, in the Banks and Commercial Houses, of Interest Tables including the various rates in use in those establishments.

These tables will also be of great advantage to professional and business men in saving them a great loss of time, caused by the frequent use of other Interest tables which do not give, for certain rates, particulars sufficient to the actual wants.

The author thinks he can affirm that this work is the most complete of this kind ever published, and he does not hesitate to state that nothing has been spared to verify its perfect accuracy.

Satisfied that his work will prove highly serviceable, he hopes it will receive a kind reception from the financial Institutions, Commercial Houses, professional and all business men in general.

USE OF THESE TABLES.

For every number of dollars less than a hundred, take the interest on the similar number of hundreds, and consider the dollars of such interest as cents, and the cents, as parts of cent. Thus, \$4,500 at seven per cent, for 75 days, give \$64.72,6, then \$450 at the same rate, and for the same time, will give \$6.47,2, and \$45, \$0.64,7.

NOTE.—For every number of dollars above 10,000, take the corresponding number less than ten thousand, and move the decimal point to the right. Thus \$4,500, at 7 per cent, for 75 days, giving \$64.72,6, \$45,000 will give \$647.26.

Required 75 days' interest on \$2344.59, * at 7 per cent.

$$\begin{array}{r} 2300 = 33.08,2 \\ 45 = 64.72,6 \\ \hline \$33.72,92,6.....\text{say } \$33.73. \end{array}$$

Required 223 days' interest on \$2753.23, at 6 per cent.

$$\begin{array}{r} 2700 = 98.97,5 \\ 53 = 1.94,28 \\ \hline \$100.91,78.....\text{say } \$100.92. \end{array}$$

For the interest of $\frac{1}{2}$ per cent, take the interest at 5 per cent. Then divide such interest by 10; or rather, put the decimal point before the units of dollars.

NOTE.—For the interest of 1 per cent, do the same operation with the rate at 10 per cent.

Required 168 days' interest on \$2438, at $\frac{1}{2}$ per cent.

$$\begin{array}{r} 2400 = 55.23,3 \\ 38 = 87,45 \\ \hline \$56.10,75.....\text{say } \$56.11 \text{ at } 5 \text{ per cent.} \\ \text{Say } \$5.61 \text{ at } \frac{1}{2} \text{ per cent.} \end{array}$$

* In general in the calculation of the interest, when there are 50 cents or more, one dollar is added to the amount; when there are less, they are disregarded. If, however, the interest on cents was required, take the interest on a similar number of dollars, and consider the dollars of such interest as cents, and the cents as parts of cent.
